

Xiaomi has produced a couple of impressive value for money earphones that sound better than the ones that come with your phone. With several smartphones going jack-less including Xiaomi's very own [Mi 6](#) flagship, the Chinese brand has finally introduced its first ever USB Type-C in-ear headphones.

Not only it supports the new interface, Xiaomi has also added active noise cancellation for a better music experience.

The typical USB Type-C earphone cable is 1.2m long, which is long enough to reach out of a smartphone from the top of the phone to the bottom of the phone, which is a good design.
