

When the iPad Pro was introduced, Tim Cook has mentioned that it [could replace a laptop](#) for a lot of people. However, if you take away the optional keyboard and Apple Pencil, it's still primarily a consumption device.

That will soon change once iOS 11 begins to roll out to all supported iPads. Read on to find out the top 6 new iOS 11 features that would transform the iPad into a productivity machine.

### **Dock on the iPad**

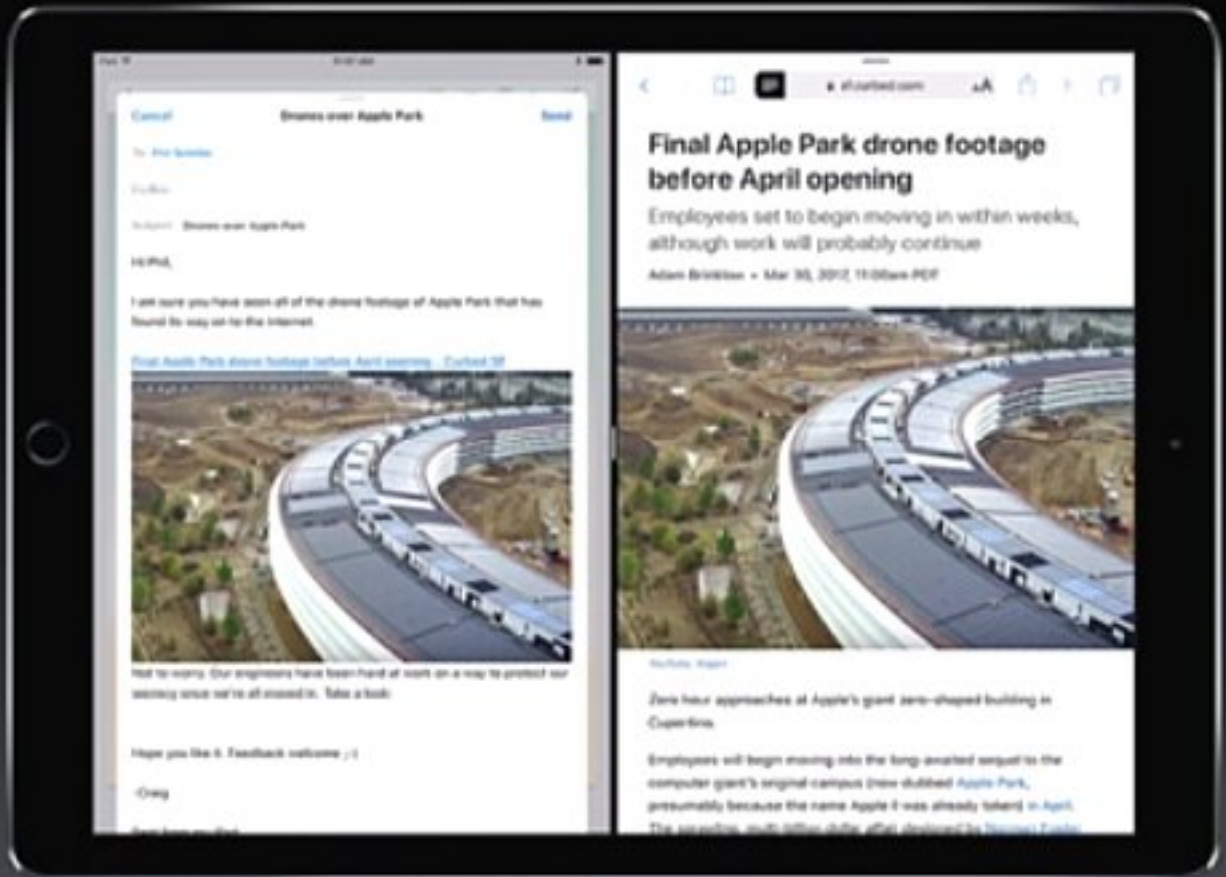

With iOS 11, Apple has introduced a new multitasking system for iPads, which allows you to run multiple apps at the same time. This is a significant improvement over the previous version of iOS, which only allowed you to run one app at a time. The new multitasking system is called 'Slide Over' and 'Picture in Picture'. Slide Over allows you to open a second app on top of the first app, and Picture in Picture allows you to run a second app in a smaller window over the first app. This is a great feature for productivity and multitasking on the iPad.

Default view for iPad. Slide over to view and choose the app to the extent of app. Either side view is your New App Switcher

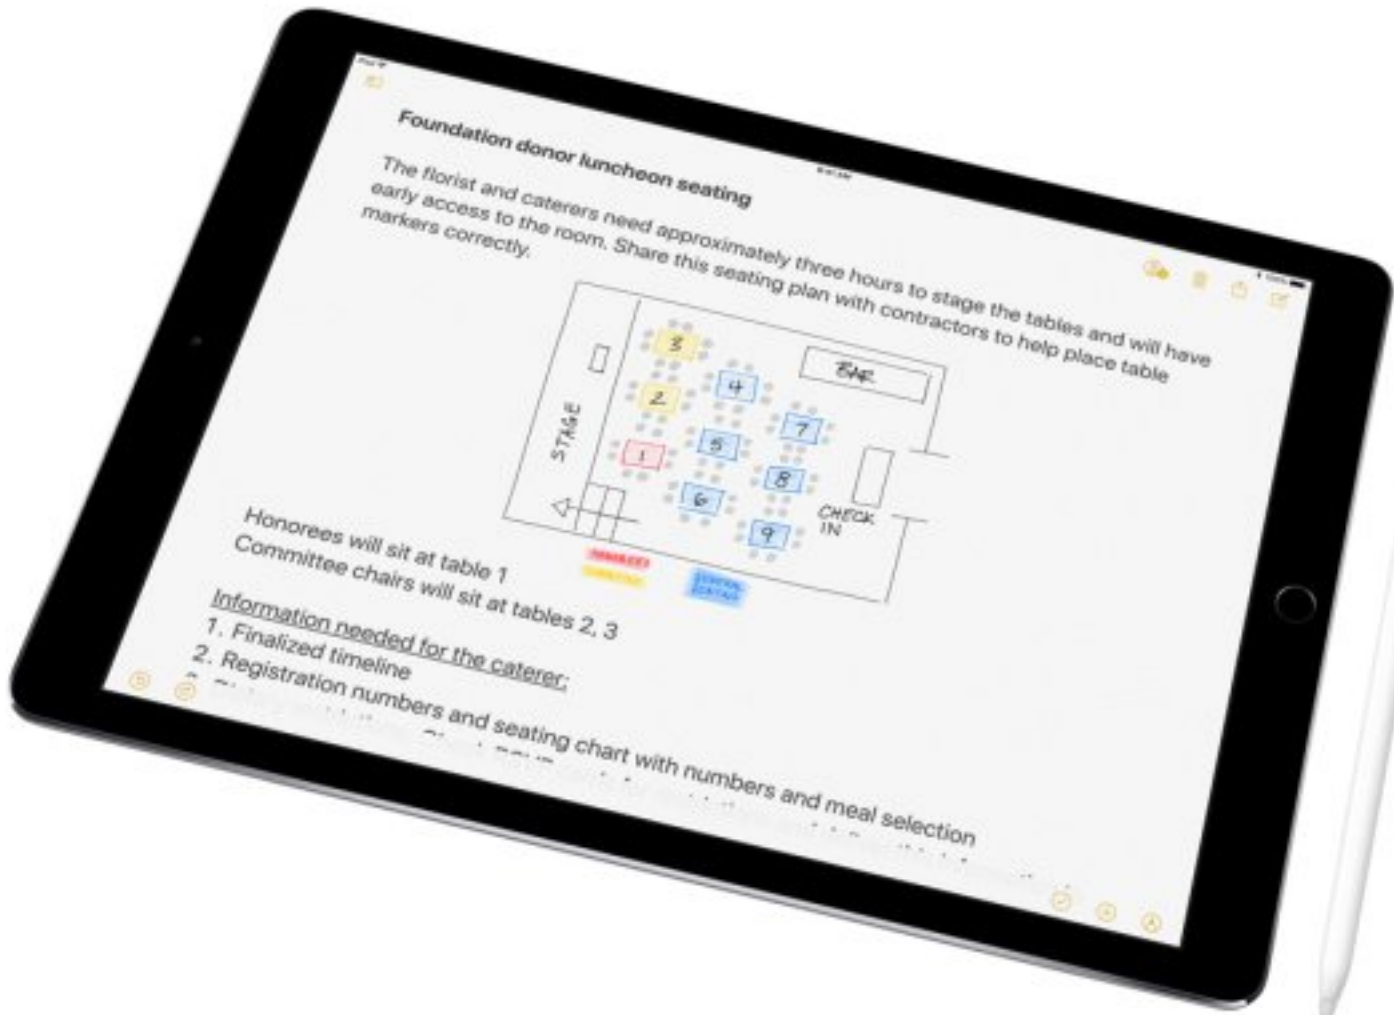

With the new iPad, you can now use the multitasking interface to quickly switch between apps. You can also use the multitasking interface to quickly drag and drop content between apps.

Files

From the first time we saw it, we were hooked. It's a game-changer for iPad users. An even smarter Pencil
