

Nokia at last comes out with something they can say "We are different and better!" The new feature of dual camera recording is an eye-opener and will definitely get many smartphone manufacturers following the same technology very soon. Its Ozo Audio if it is working as claimed it will be loved by Nokia fans.

At last, the time has come and we finally get a proper [Nokia](#) flagship smartphone that's running on Android. It's called the [Nokia 8](#) and it's an important device because it will show the world whether HMD Global (the company that owns the right to Nokia's smartphones) has a grasp on how to make a compelling Android flagship — one that will capture the magic of the Nokias of old.

The result? Well, as it stands now, it looks like it's a little bit of yes and no.

Starting things off, Nokia's flagship smartphone features a lot of the specs you would have come to expect from a 2017 flagship smartphone. In front, the Nokia 8 has a 5.3-inch Quad HD IPS display, tucked under Gorilla Glass 5, pushing a resolution of 2560×1440 pixels with 554 pixels per inch. This display is also capable of pushing up to 700 nits of brightness.

Inside, you'll find an octa-core Qualcomm Snapdragon 835 processor mated to 4GB of RAM and 64GB of expandable (up to 256GB via microSD) storage. So, as far as internals go, Nokia seems to have hit the nail on the head. Well, except for the small 3,090 mAh battery.

Microsoft is reportedly planning to launch a new smartphone in the next few months, and it's expected to be a high-end device. The new phone is expected to feature a large screen, a high-resolution camera, and a fast processor. It is also expected to have a long battery life and a sleek design. The new phone is expected to be a significant upgrade from the current Nokia 8, and it is expected to be a major competitor in the high-end smartphone market.
