

If you have webcam installed to your personal computer; you can make use of the webcam as security device to record the activities at home or in your office with the help of one free software.

### ContaCam - Video Surveillance software

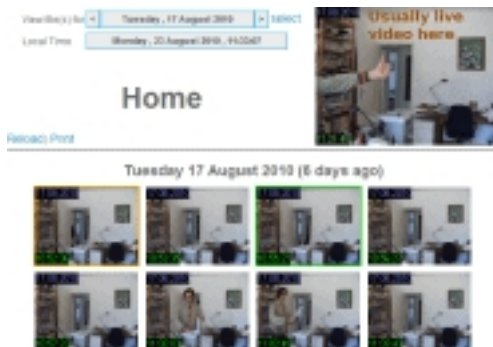

This **Free Video Surveillance and Live Webcam software for Windows** is extremely easy on system resources, and does not contain unnecessary bloat. It is **fast, light, and versatile** enough to meet all your security needs while still being very **user friendly** and able to run on even the most moderate systems.

An easy three steps **Assistant** is provided:

1. Decide for the **usage** (security surveillance, live snapshot webcam or manual records / snapshots)
2. Enter a friendly camera **name**, choose the web **appearance & language** (English, Spanish, Portuguese, French, Italian, German, Russian, Slovak, Czech, Dutch)
3. Configure how long to **keep the files** on your hard disk

For the **experts** there are dozens of additional configuration options

This is a **stable release**

- Possibility to **rotate the video source by 180°**
- The **Device Assistant** dialog **was not storing the changes to the registry** (or INI file) when pressing OK. These settings were not lost because ContaCam saves everything to the registry (or INI file) when closing

## Features

- Support for **all Windows** versions from **Windows 95** up to **Windows 8**
- The program is freeware and available in four languages: English, German, Italian and Russian
- **CCTV Security Surveillance** with motion detection and **24 hours digital video recording (DVR)**

# Remote-control Your Webcam For Security Purpose
